What is Scrum and who is the Scrum Master?

Scrum is a framework in which people can deal with complex problems while delivering valuable products. It is straightforward to understand but very difficult to master. It has been used for managing work on complex products since the early 1990s. Scrum is neither a method nor a technique; it is a framework.

The Scrum Master is said to be a servant leader for the Scrum team; s/he helps the team to understand Scrum values, rules and theory. Scrum has been used in many things that feature in our daily lives: for example to develop software, hardware, marketing and more."
